

Allegato al comunicato stampa del 10 maggio 2019

Grafici degli indici compositi regionali aggiornati al 2017

Nei grafici riportati in questo allegato sono illustrati i valori degli indici compositi relativi alle Regioni e alle Province Autonome aggiornati al 2017. In particolare, gli indici per Regione e Provincia autonoma sono rappresentati con una **linea blu continua**, quelli relativi alla ripartizione geografica di riferimento con una **linea blu tratteggiata**, mentre il valore dell'Italia con **linea arancione continua**.

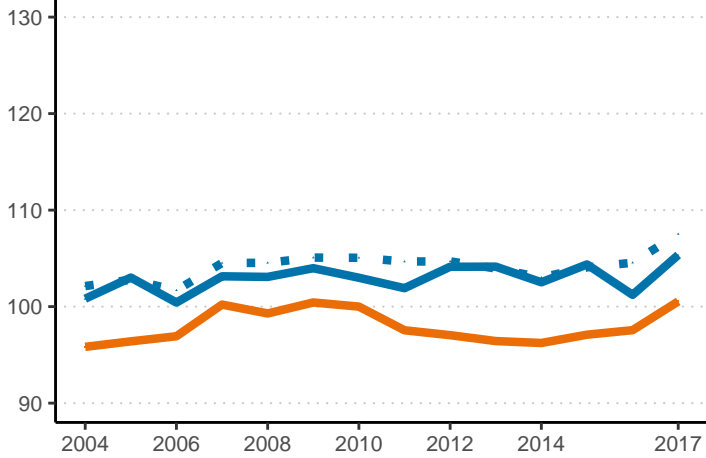

Per ogni Regione e Provincia autonoma vengono presentati 14 indici compositi, che sintetizzano l'andamento rispetto all'Italia e all'area geografica di appartenenza sulla base di oltre 80 indicatori statistici elementari resi disponibili dal Sistema Statistico Nazionale¹. La metodologia utilizzata per il calcolo degli indici compositi² si basa sulla scelta di un valore di riferimento – quello dell'Italia al 2010 – e su una standardizzazione degli indicatori elementari in un intervallo definito dai valori minimi e massimi di ciascun indicatore per tutte le unità considerate e per l'intero intervallo di tempo. Tutti gli indici compositi territoriali sono stati calcolati ponendo il valore dell'Italia al 2010 pari a 100, cosa che consente di confrontare le dinamiche temporali degli indicatori relativi ai diversi Goal all'interno della stessa regione o provincia autonoma, ma non i valori assoluti dei diversi indicatori.

¹ Per gli Obiettivi 13 (Lotta al cambiamento climatico), 14 (Vita sott'acqua) e 17 (Partnership per gli obiettivi) non è stato possibile calcolare un indice composito a causa dell'insufficienza di dati significativi a livello regionale.

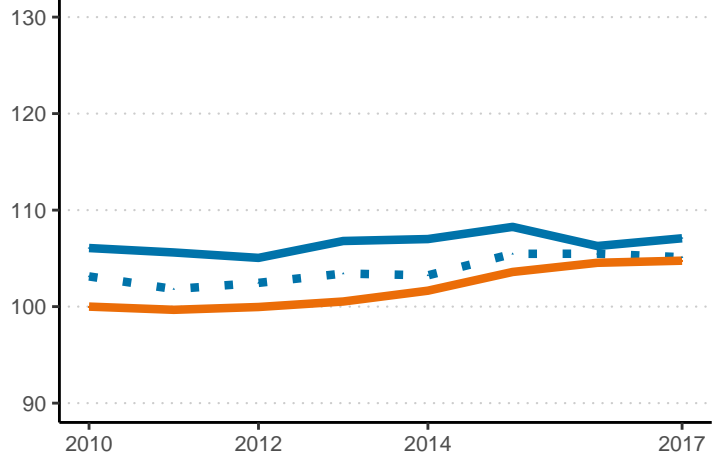

² Per maggiori informazioni sulla metodologia utilizzata si veda Mazziotta M. e Pareto A., "On a Generalized Non-compensatory Composite Index for Measuring Socio-economic Phenomena", *Social Indicators Research*, 127, 3: 983-1003. 2016).
